

DynaScan

ROTATING MULTIMEDIA LED DISPLAY

The DynaScan is a striking public display unit, with a 360degree circular display surface.

With high resolution, exceptional brightness and uncompromising colours, this revolutionary multimedia LED display gives a whole new interaction experience, allowing audiences to view your promotional message from any angle in the room.

Dynascan can display both video and still images, designed to be controlled from user-friendly software.

Pixel Size:	2.7 x 2.2mm

DESIGNED FOR

Public display
Retail display
Exhibition stands
Nightclubs
Corporate Presentations
Live Events

HoloScreen

3D EFFECT REAR PROJECTION SCREEN

When projected on, the Holo Screen creates an eye catching 3D effect which makes it stand out...literally!

Through rear projection, the Holo Screen catches the light in a specific way that creates a 3D image, which works brilliantly in bright environments where normal projection can be lost.

The Holo Screen's ability to be suspended, results in the appearance of a floating image, which is highly effective in attracting attention.

TECHNICAL

3.2 Peak Gain
60% Transparency
Great Solution for Bright Environments
Uses minimal space
Suspendable to create floating image

DESIGNED FOR

Window displays
